## *The Realities of Rural Poverty*

May 7, 2024

Real World Solutions for Systems Change

[ahpnet.com](http://ahpnet.com)

**Advocates for Human Potential, Inc.** helps local, state, and federal agencies in their work to improve health and human service systems of care. We offer technical assistance, training, system/program development, resource development/dissemination, research and evaluation.

**We'd love to talk about how we can help you!**

AIP

Insights from *Sherri Downing*  
Homelessness and Housing

**Please join my list for an occasional column on homelessness and housing.**

# Objectives

Participants will be able to:

1. Describe at least 2 outcomes associated with rural poverty
2. Name 4 demographic factors specific to rural poverty
3. Discuss 3 bridges out of poverty

# Getting Started: What Does Rural Poverty Mean To You?

# 1

## Rural Poverty

—

What is *rural*?

---

You'll know it when  
you *don't* see it

## How Rural is Your Community?

- How long does it take to drive to the nearest large community?
- What is your population density?
- What about windshield time between clients?
- How close is the nearest hospital or treatment center?

## Rural Realities

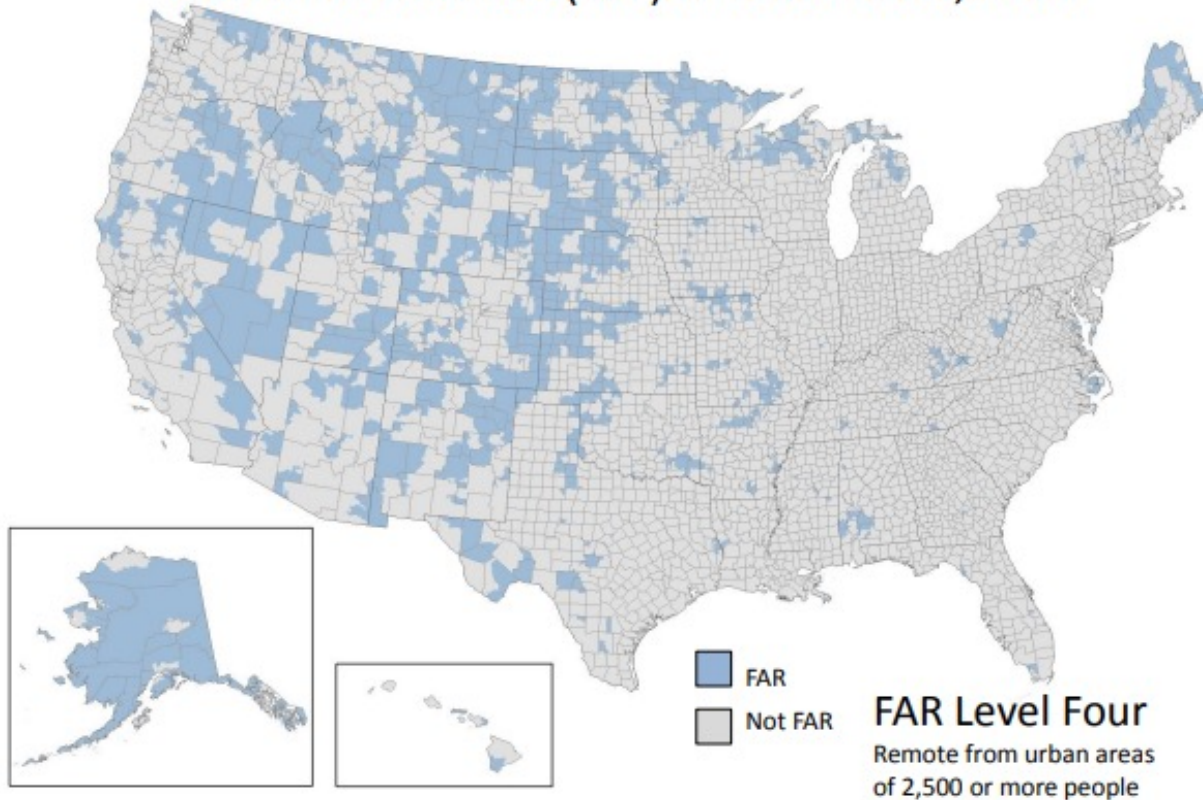

- Urban areas make up just 3% of the entire land mass of the United States, but are home to more than 80% of the population<sup>1</sup>
- 97% of the land mass is rural, but home to just 19.3% of the population<sup>1</sup>
- The *frontier* is the most remote and sparsely populated part of the country, covering approximately 46% of the land mass, and serving as home to 2.3 million people<sup>2</sup>

# Frontier and Remote America

Frontier and Remote (FAR) ZIP Code Areas, 2010

FAR Level 4:  
ZIP code areas at least:

- 60 minutes from population centers of 50,000 or more
- 45 minutes from population centers of 25,000-49,999 people
- 30 minutes from population centers of 10,000-24,999
- 15 minutes from population centers of 2,500 – 9,999

# Risk Factors Common in Rural Areas

Many rural areas have high concentrations of poverty. This results in:

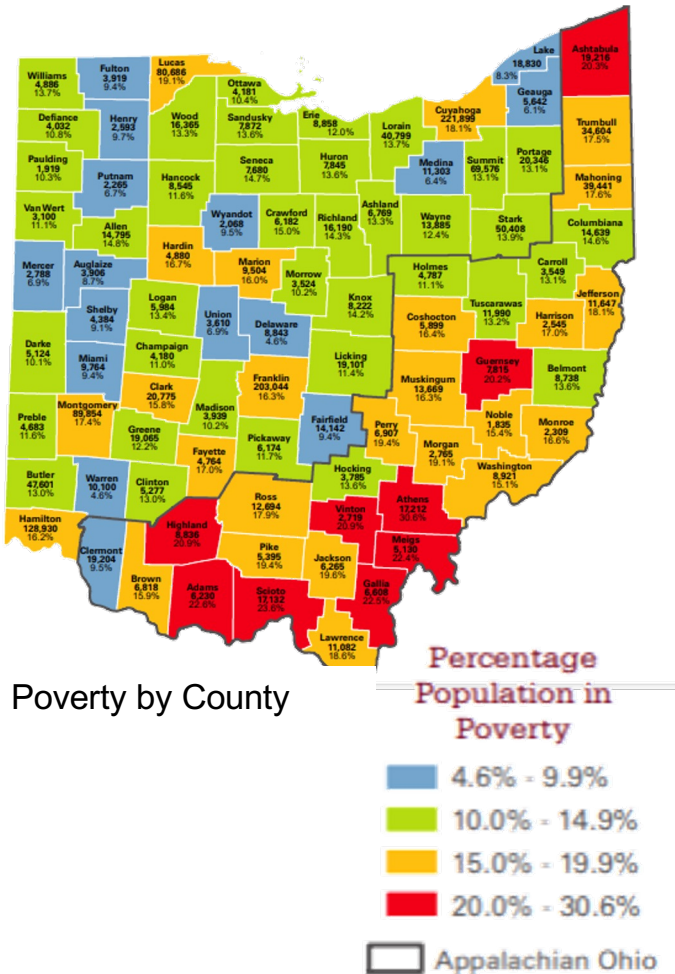

- Poor housing with limited access to rentals
- Lack of access to healthcare, including primary and behavioral healthcare
- Poor educational attainment status
- Un- and under-employment due to lack of job opportunities
- Social isolation
- Easy and early access to substances

# Poverty in Ohio

- In 2020, data showed that 1,579,000 people in Ohio were poor – that was 13.9 percent of the state’s population, a rate slightly higher than the national rate of 13.1 percent.
- About 9.7 percent of Ohio families were poor, as compared to 9.3 percent of American families.
- **15.8 percent of the people in urban places (densely populated areas of 2,500 or more) were poor, compared with 10.0 percent in rural areas (farms and smaller places).**
- 48 of Ohio’s 88 counties had poverty rates below the national average of 14.1 percent; 40 were above the average (averages based on the 2014-2018 five-year dataset).
- Adams, Athens, Gallia, Meigs and Scioto had the highest poverty rates, ranging from 22.4 to 30.6 percent – all are Appalachian (five-year averages).

# Poverty in Ohio by County

Poverty varies by county, but 17.0 percent of the people in Appalachian Ohio, a band of 32 counties stretching across the eastern and southern regions of the state, were living in poverty.

# Rising Rents and Stagnant Wages in Ohio

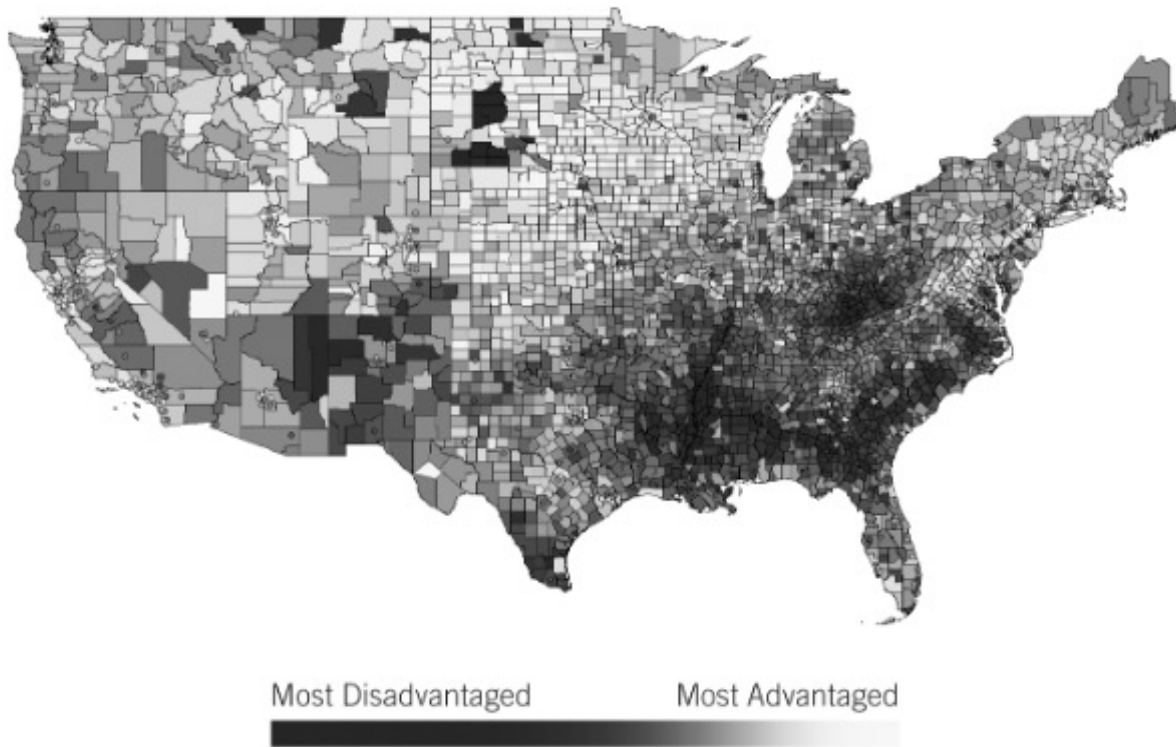

- In Ohio, 444,768 (28%) of renter households are living on extremely low incomes<sup>1</sup>
- There is a shortage of 267,382 units of rental housing that is affordable and available for extremely low-income renters<sup>1</sup>
- \$39,702 is the annual household income needed to afford a 2-bedroom rental unit at HUD's Fair Market Rent<sup>1</sup>
- 70% of extremely low-income renters have a severe cost burden (paying more than 50% of their income for rent)<sup>1</sup>
- Ohio renters are spending more on rent. Adjusted for inflation, median gross rent in Ohio increased by 10% from \$788 per month in 2012 to \$870 per month in 2021. For recent movers—who typically pay more in rent—the increase over this period is even greater (+18%), from \$799 per month in 2012 to \$942 in 2021. Rent is currently higher than in any year on record other than 2021, when adjusted for inflation.<sup>2</sup>
- Household incomes are declining, and poverty rates are rising in Ohio. After a period of improvement from 2011 to 2019, the median household income in Ohio has fallen for two years in a row. By 2021 the annual median was a little over \$62,000.<sup>3</sup>

# Income is Just Part of a Bigger Picture

- *The Injustice of Place* (Edin, K., Shaefer, H., and Nelson, Timothy), 2021 built a more nuanced way to measure community disadvantage based on the data infrastructure.
- Traditional income-based measures need to be combined with other markers, including health, race, ethnicity, income, life expectancy, infant mortality rate, education to achieve a nuanced look at poverty
- The Index of Deep Disadvantage
  - Reflects traditional poverty indicators (official poverty rate and the rate of deep poverty – or those with incomes below half of the poverty line)
  - Two health markers (low birth rate and life expectancy)
  - The rate of intergenerational mobility for children who grew up in low-income households

# The Injustice of Place: The Most Disadvantaged Places

Source: The Injustice of Place. Page 5.

- The majority of the most disadvantaged places were rural.
- At the top of the list were communities of Black and Hispanic Americans
- Places with large Native American Populations comprised 19 of the top 200 counties
- In addition to Native American communities the most disadvantaged places are found in 3 regions: Appalachia, South Texas and the southern Cotton Belt that runs across 7 states

# The Enduring Legacy of Poverty

- *Where* someone grows up significantly impacts life outcomes.
- The Index of Deep Disadvantage looks at well-being, which combines income-based and health-based indicators.
- The rural areas defined as the most disadvantaged places demonstrated a glaring divide between a small group of “haves” and a large class of “have-nots”. People in these places are often exploited by a single industry.

# Inequality

- Inequality between the “haves” and “have nots” is predicated on the availability of cheap, exploitable labor
- This is especially pervasive in the most disadvantaged places
- There are deep historic roots of current inequalities, dating back to the time following emancipation
- Indicators used in *The Injustice of Place* reflect three dimensions:
  - Cyclical measures that vary with the economy (poverty, deep poverty)
  - Cumulative measures reflecting the ways long-term exposure to disadvantage shapes outcomes over time
  - Structural measures that reflect how the labor market offers opportunities
